NAME

is_context_customizable – check whether SELinux context type is customizable by the administrator

SYNOPSIS

#include <selinux/selinux.h>

int is_context_customizable(char **scon***);**

DESCRIPTION

This function checks whether the type of scon is in the *ized/selinux/{SELINUXTYPE}/context/customizable_types* file. A customizable type is a file context type that administrators set on files, usually to allow certain domains to share the file content. restorecon and setfiles, by default, leave these context in place.

RETURN VALUE

Returns 1 if security context is customizable or 0 if it is not. Returns −1 on error.

FILE

/etc/selinux/{SELINUXTYPE}/context/customizable_types
