NAME
g-ir-compiler – Typelib compiler

SYNOPSIS
g−ir−compiler [OPTION...] GIRFILE

DESCRIPTION
g−ir−compiler converts one or more GIR files into one or more typelib. The output will be written to standard output unless the **−−output** is specified.

OPTIONS
−−help   Show help options

−−output=_FILENAME_
> Save the resulting output in FILENAME.

−−verbose
> Show verbose messages

−−debug
> Show debug messages

−−includedir=_DIRECTORY_
> Adds a directory which will be used to find includes inside the GIR format.

−−module=_MODULE_
> FIXME

−−shared−library=_FILENAME_
> Specifies the shared library where the symbols in the typelib can be found. The name of the library should not contain the ending shared library suffix.

−−version
> Show program's version number and exit
