NAME

lb_build – Complete the bootstrap, chroot, installer, binary, and source stages

SYNOPSIS

lb build [*OPTIONS*]

DESCRIPTION

lb build is a high−level command (porcelain) of *live−build*(7), the Debian Live tool suite.

lb build calls all necessary live−build programs in the correct order to complete the bootstrap, chroot, installer, binary, and source stages.

OPTIONS

lb build has no specific options but understands all generic live−build options. See *live−build*(7) for a complete list of all generic live−build options.

FILES

auto/build

SEE ALSO

live−build(7)

This program is a part of live−build.

HOMEPAGE

More information about live−build and the Debian Live project can be found on the homepage at *<https://wiki.debian.org/DebianLive>*.

BUGS

Bugs can be reported by submitting a bug report for the live−build package in the Bug Tracking System at *<http://bugs.debian.org/>* or by writing a mail to the Debian Live mailing list at *<debian-live@lists.debian.org>*.

AUTHOR

live−build was originally written by Daniel Baumann *<mail@daniel-baumann.ch>*. Since 2016 development has been continued by the Debian Live team.
