NAME
>   xsetpointer – set an X Input device as the main pointer

SYNOPSIS
>   **xsetpointer –l** | *device-name*

DESCRIPTION
>   Xsetpointer sets an XInput device as the main pointer. When called with the –l flag it lists the available de-
>   vices. When called with the -c/+c flag, it toggles the sending of core input events, for servers which imple-
>   ment a virtual core pointer; -c disables core events, and +c enables.
