NAME

XtTranslateCoords – translate widget coordinates

SYNTAX

#include <X11/Intrinsic.h>

void XtTranslateCoords(Widget *w*, Position *x*, Position *y*, Position **rootx_return*, Position **rooty_return*);

ARGUMENTS

rootx_return
rooty_return   Returns the root-relative x and y coordinates.

x
y   Specify the widget-relative x and y coordinates.

w   Specifies the widget.

DESCRIPTION

While **XtTranslateCoords** is similar to the Xlib **XTranslateCoordinates** function, it does not generate a server request because all the required information already is in the widget's data structures.
