NAME

update-grub-gfxpayload — update /boot/grub/gfxblacklist.txt

SYNOPSIS

update-grub-gfxpayload

DESCRIPTION

update-grub-gfxpayload updates `/boot/grub/gfxblacklist.txt` from source files in `/usr/share/grub-gfxpayload-lists/blacklist/`, which disables GRUB's `gfxpayload=keep` facility with certain graphics cards. It should normally only need to be called internally by packages.

If you need to disable `gfxpayload=keep` locally (perhaps because your system starts up with a black or corrupt screen), then you do not need this program. Instead, add this line to `/etc/default/grub`:

```
GRUB_GFXPAYLOAD_LINUX=text
```
