NAME

kerneloops – program to collect and submit kernel oopses to oops.kernel.org

SYNOPSIS

kerneloops

DESCRIPTION

This manual page documents briefly the **kerneloops** commands.

kerneloops is a program that collects kernel crash information and then submits the extracted signature to the oops.kernel.org website for statistical analysis and presentation to the Linux kernel developers.

OPTIONS

−−file filename

Parse the file denoted with filename as if it were /var/log/messages

−−debug

Enable debug mode

−−nodaemon

Do not daemonize

FILES

/etc/kerneloops.conf

AUTHOR

kerneloops was written by Arjan van de Ven <arjan@linux.intel.com>.
