NAME

      PCRE2 - Perl-compatible regular expressions (revised API)

SYNOPSIS

      #include <pcre2.h>

      void pcre2_serialize_free(uint8_t **bytes***);**

DESCRIPTION

      This function frees the memory that was obtained by **pcre2_serialize_encode()** to hold a serialized byte stream. The argument must point to such a byte stream or be NULL, in which case the function returns without doing anything.

      There is a complete description of the PCRE2 native API in the **pcre2api** page and a description of the serialization functions in the **pcre2serialize** page.
