NAME
      cmd.js − Test-Anything-Protocol parser for Node.js

DESCRIPTION
  Usage:

        tap−parser <options>

Parses TAP data from stdin, and outputs the parsed result in the format specified by the options. Default output is uses node's 'util.format()' method.

OPTIONS
      −j [<indent>] | **−−json**[=*indent*]

        Output event data as JSON with the specified indentation (default=2)

      −t | **−−tap**

        Output data as reconstituted TAP based on parsed results

      −l | **−−lines**

        Output each parsed line as it is recognized by the parser

      −b | **−−bail**

        Emit a 'Bail out!' at the first failed test point encountered

      −w | **−−ignore−all−whitespace**

        Skip over blank lines outside of YAML blocks

      −o | **−−omit−version**

        Ignore the 'TAP version 13' line at the start of tests
