NAME
npm-unstar – Remove an item from your favorite packages

Synopsis
npm unstar [<pkg>...]

Note: This command is unaware of workspaces.

Description
"Unstarring" a package is the opposite of npm help **star**, it removes an item from your list of favorite packages.

More
There's also these extra commands to help you manage your favorite packages:

Star
You can "star" a package using npm help **star**

Listing stars
You can see all your starred packages using npm help **stars**

Configuration
<!−− AUTOGENERATED CONFIG DESCRIPTIONS START −−> <!−− automatically generated, do not edit manually −−> <!−− see lib/utils/config/definitions.js −−>

registry
- Default: "https://registry.npmjs.org/"
- Type: URL

The base URL of the npm registry. <!−− automatically generated, do not edit manually −−> <!−− see lib/utils/config/definitions.js −−>

unicode
- Default: false on windows, true on mac/unix systems with a unicode locale, as defined by the **LC_ALL**, **LC_CTYPE**, or **LANG** environment variables.
- Type: Boolean

When set to true, npm uses unicode characters in the tree output. When false, it uses ascii characters instead of unicode glyphs. <!−− automatically generated, do not edit manually −−> <!−− see lib/utils/config/definitions.js −−>

otp
- Default: null
- Type: null or String

This is a one−time password from a two−factor authenticator. It's needed when publishing or changing package permissions with **npm access**.

If not set, and a registry response fails with a challenge for a one−time password, npm will prompt on the command line for one. <!−− automatically generated, do not edit manually −−> <!−− see lib/utils/config/definitions.js −−>

<!−− AUTOGENERATED CONFIG DESCRIPTIONS END −−>
