NAME
        sepol_check_context − Check the validity of a security context against a binary policy.

SYNOPSIS
        #include <sepol/sepol.h>

        int sepol_check_context(const char **context***);**

        int sepol_set_policydb_from_file(FILE * ***fp*);**

DESCRIPTION
        sepol_check_context checks the validity of a security context against a binary policy previously loaded
        from a file via **sepol_set_policydb_from_file.** It is used by **setfiles -c** to validate a file contexts configura-
        tion against the binary policy upon policy builds. For validating a context against the active policy on a
        SELinux system, use **security_check_context** from libselinux instead.

RETURN VALUE
        Returns 0 on success or −1 with errno set otherwise.
