NAME

conjure – interprets and executes scripts written in the Magick Scripting Language (MSL).

SYNOPSIS

conjure-im6.q16 [*options*] *script.msl*

OVERVIEW

The **conjure-im6.q16** program is a member of the ImageMagick-ims6.q16(1) suite of tools. Use it to process a Magick Scripting Language (MSL) script. The Magick scripting language (MSL) will primarily benefit those that want to accomplish custom image processing tasks but do not wish to program, or those that do not have access to a Perl interpreter or a compiler.

For more information about the conjure command, point your browser to file:///usr/share/doc/image-magick-6-common/html/www/conjure.html (on debian system you may install the imagemagick-6 package) or https://www.imagemagick.org/script/conjure.php.

DESCRIPTION

Image Settings:
```
 −monitor          monitor progress
 −quiet            suppress all warning messages
 −regard-warnings  pay attention to warning messages
 −seed value       seed a new sequence of pseudo-random numbers
 −verbose          print detailed information about the image
```

Miscellaneous Options:
```
 −debug events     display copious debugging information
 −help             print program options
 −log format       format of debugging information
 −list type        print a list of supported option arguments
 −version          print version information
```

In additiion, define any key value pairs required by your script. For example,

    conjure −size 100x100 −color blue −foo bar script.msl
