NAME

selabel_stats – obtain SELinux labeling statistics

SYNOPSIS

#include <selinux/selinux.h>
#include <selinux/label.h>

void selabel_stats(struct selabel_handle *_hnd_**);**

DESCRIPTION

selabel_stats() causes zero or more messages to be printed containing backend-specific information about number of queries performed, number of unused entries, or other operational information.

The messages are printed to standard error by default; a custom logging function can be provided via **selinux_set_callback**(3).

RETURN VALUE

None.

ERRORS

None.

AUTHOR

Eamon Walsh <ewalsh@tycho.nsa.gov>
