NAME
tgz – makes a gzip'd tar archive

SYNOPSIS
tgz [*destination* [*source ...*]]

DESCRIPTION
Make a gzip'd tar archive with the name of the first parameter out of specified files or, if no source files are specified, from everything in the current directory. If the first parameter is omitted as well, the archive will be written to stdout.

BUGS
tgz requires gzip in the user's path. It also needs gnu tar or something close due to use of --exclude, --totals and -S.

AUTHOR
Filip Van Raemdonck (mechanix@debian.org) wrote this page for the *Debian/GNU* mtools package.
