NAME

system-config-printer − configure a CUPS server

SYNOPSIS

system−config−printer [[−−show−jobs *printer*] | [−−debug] | [−−help]]

DESCRIPTION

system−config−printer configures a CUPS server. It uses the CUPS API (bound to Python with pycups) to do this. The communication with the server is performed using IPP. As a result, it is equally able to configure a remote CUPS server as a local one.

OPTIONS

−−help
Display a short usage message.

−−show−jobs *printer*
Show the named print queue.

−−debug
Enable debugging output.
