NAME
roff2html − transform roff code into html mode

SYNOPSIS
roff2html [*groffer-option* …] [−−] [*filespec* …]

roff2html −h
roff2html −−help

roff2html −v
roff2html −−version

The options −**v** and −−**version** print the version information of the program to standard output and exit.
The options −**h** and −−**help** print a usage information of the program to standard output and stop the program instantly.

All other options are assumed to be **groffer** options. They are internally passed to **groffer**. They override
the behavior of the program. The options are optional, they can be omitted.

The *filespec* arguments correspond to the *filespec* arguments of **groffer**. So they are either the names of existing, readable files or − for standard input, or the name of a man page or a **groffer**(1) man page search
pattern. If no *filespec* is specified standard input is assumed automatically.

DESCRIPTION
roff2html transforms *roff* code into *html* mode. Print the result to standard output.

There are more of these programs for generating other formats of *roff* input.

roff2dvi(1)
    is for *dvi* mode.

roff2pdf(1)
    outputs *pdf* mode.

roff2ps(1)
    prints *PostScript* format to standard output.

roff2text(1)
    generates text output in the **groff** device *latin1*.

roff2x(1)
    prints the output in the **groff** device **X** that is suitable for programs like **gxditview**(1) or
    xditview(1).

AUTHORS
roff2html was written by Bernd Warken ⟨groff−bernd.warken−72@web.de⟩.
