NAME

npm-completion – Tab Completion for npm

Synopsis

source <(npm completion)

Note: This command is unaware of workspaces.

Description

Enables tab−completion in all npm commands.

The synopsis above loads the completions into your current shell. Adding it to your ˜/.bashrc or ˜/.zshrc will make the completions available everywhere:

npm completion >> ˜/.bashrc
npm completion >> ˜/.zshrc

You may of course also pipe the output of **npm completion** to a file such as **/usr/local/etc/bash_completion.d/npm** or **/etc/bash_completion.d/npm** if you have a system that will read that file for you.

When **COMP_CWORD**, **COMP_LINE**, and **COMP_POINT** are defined in the environment, **npm completion** acts in "plumbing mode", and outputs completions based on the arguments.
