NAME
      dh_python3−ply – generate versioned dependencies on python3−ply

SYNOPSIS
      dh_python3−ply [−−**dependency−field** *dependencyfield*] [*debhelper options*] *file...*

DESCRIPTION
      dh_python3−ply is a debhelper program that is responsible for generating the **python3−ply:Depends** substitutions and adding them to substvars files.

      The program will look only at Python3 modules that are explicitly provided as its arguments, and will use this information to generate a strict versioned dependency on **python3−ply**.

OPTIONS
      −−**dependency−field** *dependencyfield*
          Use **python3−ply:***dependencyfield* substitution variable instead of **python3−ply:Depends**.

SEE ALSO
      debhelper (7)

      This program is not a part of debhelper, but it is meant to be used together with it.
