NAME
envsubst – substitutes environment variables in shell format strings

SYNOPSIS
envsubst [*OPTION*] [*SHELL-FORMAT*]

DESCRIPTION
Substitutes the values of environment variables.

Operation mode:

−v, **−−variables**
> output the variables occurring in SHELL−FORMAT

Informative output:

−h, **−−help**
> display this help and exit

−V, **−−version**
> output version information and exit

In normal operation mode, standard input is copied to standard output, with references to environment variables of the form $VARIABLE or ${VARIABLE} being replaced with the corresponding values. If a SHELL−FORMAT is given, only those environment variables that are referenced in SHELL−FORMAT are substituted; otherwise all environment variables references occurring in standard input are substituted.

When **−−variables** is used, standard input is ignored, and the output consists of the environment variables that are referenced in SHELL−FORMAT, one per line.
