NAME

goa-daemon – GNOME Online Accounts Daemon

SYNOPSIS

goa−daemon [−−**help**] [−−**replace**]

DESCRIPTION

The **goa−daemon** program provides the *org.gnome.OnlineAccounts* name on the session message bus. Users or administrators should never need to start this daemon as it will be automatically started by **dbus-daemon**(1) whenever an application sends a D−Bus message to the *org.gnome.OnlineAccounts* name on the session bus.

CONFIGURATION FILE

The **goa−daemon** program stores configuration in the $XDG_CONFIG_HOME/goa−1.0/accounts.conf (typically ˜/.config/goa−1.0/accounts.conf) file. The format of this file is private and 3rd party programs or libraries should never read it. This file does not contain any passwords or secrets.

See the **XDG Base Directory Specification**[1] for more information about $XDG_CONFIG_HOME.

SECRETS

The **goa−daemon** program stores secrets (such as OAuth tokens) in **GNOME Keyring**[2]. The format of the stored secrets is private and 3rd party programs or libraries should never read, modify or delete these secrets.

OPTIONS

−−replace
    Replace existing instance.

−−help
    Show help options.

AUTHOR

Written by David Zeuthen <zeuthen@gmail.com> with a lot of help from many others.

BUGS

Please send bug reports to either the distribution bug tracker or the upstream bug tracker at **https://gitlab.gnome.org/GNOME/gnome-online-accounts/issues**. There are some debugging tips at **https://wiki.gnome.org/Projects/GnomeOnlineAccounts/Debugging**
