NAME
roff2text – transform roff code into text mode

SYNOPSIS
roff2text [*groffer-option* …] [−−] [*filespec* …]

roff2text −h
roff2text −−help

roff2text −v
roff2text −−version

The options **−v** and **−−version** print the version information of the program to standard output and exit. The options **−h** and **−−help** print a usage information of the program to standard output and stop the program instantly.

All other options are assumed to be **groffer** options. They are internally passed to **groffer**. They override the behavior of the program. The options are optional, they can be omitted.

The *filespec* arguments correspond to the *filespec* arguments of **groffer**. So they are either the names of existing, readable files or − for standard input, or the name of a man page or a **groffer**(1) man page search pattern. If no *filespec* is specified standard input is assumed automatically.

DESCRIPTION
roff2text transforms *roff* code into *text* mode. Print the result to standard output.

There are more of these programs for generating other formats of *roff* input.

roff2dvi(1)
is for *dvi* mode.

roff2html(1)
generates *HTML* output.

roff2pdf(1)
outputs *pdf* mode.

roff2ps(1)
prints *PostScript* format to standard output.

roff2x(1)
prints the output in the **groff** device **X** that is suitable for programs like **gxditview**(1) or **xditview**(1).

AUTHORS
roff2text was written by Bernd Warken ⟨groff−bernd.warken−72@web.de⟩.
