NAME

PCRE2 - Perl-compatible regular expressions (revised API)

SYNOPSIS

#include <pcre2.h>

void pcre2_convert_context_free(pcre2_convert_context *_cvcontext_**);**

DESCRIPTION

This function is part of an experimental set of pattern conversion functions. It frees the memory occupied by a convert context, using the memory freeing function from the general context with which it was created, or **free()** if that was not set. If the argument is NULL, the function returns immediately without doing anything.

The pattern conversion functions are described in the **pcre2convert** documentation.
