NAME

lfind, lsearch – linear search of an array

LIBRARY

Standard C library (*libc*, *−lc*)

SYNOPSIS

#include <search.h>

void *lfind(const void *key***[.***size***], const void** *base***[.***size* * .*nmemb***],**
  size_t **nmemb***, size_t** *size***,**
  int(**compar***)(const void [.***size***], const void [.***size***]));**
void *lsearch(const void *key***[.***size***], void** *base***[.***size* * .*nmemb***],**
  size_t **nmemb***, size_t** *size***,**
  int(**compar***)(const void [.***size***], const void [.***size***]));**

DESCRIPTION

lfind() and **lsearch**() perform a linear search for *key* in the array *base* which has **nmemb* elements of *size* bytes each. The comparison function referenced by *compar* is expected to have two arguments which point to the *key* object and to an array member, in that order, and which returns zero if the *key* object matches the array member, and nonzero otherwise.

If **lsearch**() does not find a matching element, then the *key* object is inserted at the end of the table, and **nmemb* is incremented. In particular, one should know that a matching element exists, or that more room is available.

RETURN VALUE

lfind() returns a pointer to a matching member of the array, or NULL if no match is found. **lsearch**() returns a pointer to a matching member of the array, or to the newly added member if no match is found.

ATTRIBUTES

For an explanation of the terms used in this section, see **attributes**(7).

Interface	Attribute	Value
lfind(), **lsearch**()	Thread safety	MT-Safe

STANDARDS

POSIX.1-2001, POSIX.1-2008, SVr4, 4.3BSD. Present in libc since libc-4.6.27.

BUGS

The naming is unfortunate.
