NAME

selabel_partial_match – determine whether a direct or partial match is possible on a file path – Only supported on file backend.

SYNOPSIS

#include <stdbool.h>
#include <selinux/selinux.h>
#include <selinux/label.h>

bool selabel_partial_match(struct selabel_handle *hnd**,**
                            const char *key**);**

DESCRIPTION

selabel_partial_match() performs a partial match operation on the handle *hnd*, returning TRUE or FALSE. The *key* parameter is a file path to check for a direct or partial match.

RETURN VALUE

TRUE is returned if a direct or partial match is found, FALSE if not.
