NAME

X11::Protocol::Connection::FileHandle – Perl module base class for FileHandle–based X11 connections

SYNOPSIS

```
package X11::Protocol::Connection::WeirdFH;
use X11::Protocol::Connection::FileHandle;
@ISA = ('X11::Protocol::Connection::FileHandle')
```

DESCRIPTION

This module defines **get()**, **give()** and **fh()** methods common to X11::Protocol::Connection types that are based on the FileHandle package. They expect the object they are called with to be a reference to a FileHandle.

AUTHOR

Stephen McCamant <SMCCAM@cpan.org>.
