NAME
npm-shrinkwrap – Lock down dependency versions for publication

Synopsis
npm shrinkwrap

Note: This command is unaware of workspaces.

Description
This command repurposes **package−lock.json** into a publishable **npm−shrinkwrap.json** or simply creates a new one. The file created and updated by this command will then take precedence over any other existing or future **package−lock.json** files. For a detailed explanation of the design and purpose of package locks in npm, see npm help package−lock−json.
