NAME

tlp.service – Initialize power saving at boot and cleanup upon shutdown

SYNOPSIS

tlp.service

DESCRIPTION

tlp.service executes the following tasks:

1. System boot-up: switch or restore radio states, apply power saving settings and charge thresholds.

2. System shutdown: save radio states and cleanup.

FILES

/lib/systemd/system-sleep/tlp
> Applies power saving settings upon system suspend and resume.

SEE ALSO

tlp(8).

NOTES

Do *not* employ tlp.service to refresh power saving settings after a configuration change. Use **tlp start** instead.
