NAME

oomctl − Analyze the state stored in **systemd−oomd**

SYNOPSIS

oomctl [OPTIONS...] {COMMAND}

DESCRIPTION

oomctl may be used to get information about the various contexts read in by the **systemd**(1) userspace
out−of−memory (OOM) killer, **systemd-oomd**(8).

COMMANDS

The following commands are understood:

dump

Show the current state of the cgroup(s) and system context(s) stored by **systemd−oomd**.

OPTIONS

The following options are understood:

−h, **−−help**

Print a short help text and exit.

−−version

Print a short version string and exit.

−−no−pager

Do not pipe output into a pager.

EXIT STATUS

On success, 0 is returned, a non−zero failure code otherwise.
