NAME
proxy – Display the proxy server that should be used to reach a given a network resource

SYNOPSIS
proxy

DESCRIPTION
Display the proxy server that should be used to reach a given a network resource.

libproxy is a library that provides automatic proxy configuration management using different backends.

EXAMPLE
echo http://www.example.com/ | proxy
 http://webcache:3128 direct://

AUTHOR
This manual page was written by Laurent Bigonville ⟨bigon@debian.org⟩, for the Debian GNU/Linux system (but may be used by others).
