NAME
bt−obex − a bluetooth OBEX client/server

SYNOPSIS
bt-obex [OPTION...]

Help Options:
  −h, −−help

Application Options:
  −a, −−adapter=<name|mac>
  −s, −−server [<path>]
  −p, −−opp <name|mac> <file>
  −f, −−ftp=<name|mac>

DESCRIPTION
This utility implemented support of Object Push Profile (OPP) and File Transfer Profile (FTP). You can send and receive files to/from remote device using this tool.

OPTIONS
−h, −−help
  Show help

−a, −−adapter <name|mac>
  Specify adapter to use by his Name or MAC address
  (if this option does not defined − default adapter used)

−s, −−server [<path>]
  Register agent at OBEX server and set incoming/root directory to
  'path' or current folder will be used; Agent is used to
  accept/reject incoming bluetooth object push requests

−p, −−opp <name|mac> <file>
  Send local file to the specified remote device using object push
  profile

−f, −−ftp <name|mac>
  Start FTP session with remote device; If session opened
  successfuly, FTP shell will be opened

```
    FTP commands:

        help                    Show help message
        exit                    Close FTP session
        cd <folder>             Change the current folder of the remote device
        mkdir <folder>          Create a new folder in the remote device
        ls                      List folder contents
        get <src> <dst>         Copy the src file (from remote device) to the dst
        put <src> <dst>         Copy the src file (from local filesystem) to the
        cp <src> <dst>          Copy a file within the remote device from src fil
        mv <src> <dst>          Move a file within the remote device from src fil
        rm <target>             Deletes the specified file/folder
```
