NAME

File::IconTheme – Find icon directories

VERSION

version 0.09

SYNOPSIS

```
use File::IconTheme qw(xdg_icon_theme_search_dirs);
print join "\n", xdg_icon_theme_search_dirs;
```

DESCRIPTION

This module can be used to find directories as specified by the Freedesktop.org Icon Theme Specification. Currently only a tiny (but most useful) part of the specification is implemented.

In case you want to **store** an icon theme, use the directory returned by:

```
use File::BaseDir qw(data_dirs);
print scalar data_dirs('icons');
```

FUNCTIONS

Can be exported on request.

xdg_icon_theme_search_dirs

```
my @dirs = xdg_icon_theme_search_dir;
```

Returns a list of the base directories of icon themes.

CONFIGURATION AND ENVIRONMENT

$XDG_DATA_HOME, $XDG_DATA_DIRS
