NAME
ip-netconf − network configuration monitoring

SYNOPSIS
ip [ip-OPTIONS] **netconf show** [**dev** *NAME*]

DESCRIPTION
The **ip netconf** utility can monitor IPv4 and IPv6 parameters (see **/proc/sys/net/ipv[4|6]/conf/[all|DEV]/**)
like forwarding, rp_filter, proxy_neigh, ignore_routes_with_linkdown or mc_forwarding status.

If no interface is specified, the entry **all** is displayed.

ip netconf show - display network parameters
dev *NAME*
> the name of the device to display network parameters for.

SEE ALSO
ip(8)
