NAME

gvfsd-fuse − Fuse daemon for gvfs

SYNOPSIS

gvfsd−fuse PATH

DESCRIPTION

gvfsd−fuse maintains a fuse mount to make gvfs backends available to POSIX applications. The mount point for the fuse filesystem is provided by the [PATH] argument.

gvfsd−fuse is normally started by **gvfsd**(1). In this case, the mount point is **$XDG_RUNTIME_DIR**/gvfs or **$HOME**/.gvfs.

OPTIONS

−d

Enable fuse debug output. This implies **−f**.

−f

Run in the foreground.

−s

Run single−threaded.

−o OPTION

Set a fuse−specific option. See the fuse documentation for a list of these.

EXIT STATUS

On success 0 is returned, a non−zero failure code otherwise.
