NAME

git−lfs−status − Show the status of Git LFS files in the working tree

SYNOPSIS

git lfs status [*options*]

DESCRIPTION

Display paths of Git LFS objects that

○ have not been pushed to the Git LFS server. These are large files that would be uploaded by **git push**.

○ have differences between the index file and the current HEAD commit. These are large files that would be committed by **git commit**.

○ have differences between the working tree and the index file. These are files that could be staged using **git add**.

This command must be run in a non−bare repository.

OPTIONS

−−porcelain

Give the output in an easy−to−parse format for scripts.

−−json   Give the output in a stable json format for scripts.

SEE ALSO

git−lfs−ls−files(1).

Part of the git−lfs(1) suite.
