NAME

psresize − rescales and centers a document for new output paper size

SYNOPSIS

psresize [−**w***width*] [−**h***height*] [−**p***paper*] [−**W***width*] [−**H***height*] [−**P***paper*] [−**q**] [*infile* [*outfile*]]

DESCRIPTION

Psresize rescales and centres a document on a different size of paper. The input PostScript file should follow the Adobe Document Structuring Conventions.

The −*w* option gives the output paper width, and the −*h* option gives the output paper height, normally specified in **cm** or **in** to convert PostScript's points (1/72 of an inch) to centimeters or inches. The −*p* option can be used as an alternative, to set the output paper size to **a0, a1, a2, a3, a4, a5, b5, letter, legal, tabloid, statement,** executive, folio, quarto or **10x14.** The default output paper size is **a4.**

The −*W* option gives the input paper width, and the −*H* option gives the input paper height. The −*P* option can be used as an alternative, to set the input paper size. The default input paper size is **a4.**

Psresize normally prints the page numbers of the pages output; the −*q* option suppresses this.

EXAMPLES

The following command can be used to convert a document on A4 size paper to letter size paper:

psresize -PA4 -pletter in.ps out.ps
