NAME
   roff2ps – transform roff code into ps mode

SYNOPSIS
   roff2ps [*groffer-option* …] [−−] [*filespec* …]

   roff2ps −h
   roff2ps −−help

   roff2ps −v
   roff2ps −−version

   The options **−v** and **−−version** print the version information of the program to standard output and exit.
   The options **−h** and **−−help** print a usage information of the program to standard output and stop the pro-
   gram instantly.

   All other options are assumed to be **groffer** options. They are internally passed to **groffer**. They override
   the behavior of the program. The options are optional, they can be omitted.

   The *filespec* arguments correspond to the *filespec* arguments of **groffer**. So they are either the names of ex-
   isting, readable files or − for standard input, or the name of a man page or a **groffer**(1) man page search
   pattern. If no *filespec* is specified standard input is assumed automatically.

DESCRIPTION
   roff2ps transforms *roff* code into *ps* mode. Print the result to standard output.

   There are more of these programs for generating other formats of *roff* input.

   roff2dvi(1)
         is for *dvi* mode.

   roff2html(1)
         generates *HTML* output.

   roff2pdf(1)
         outputs *pdf* mode.

   roff2text(1)
         generates text output in the **groff** device *latin1*.

   roff2x(1)

         prints the output in the **groff** device **X** that is suitable for programs like **gxditview**(1) or
         xditview(1).

AUTHORS
   roff2ps was written by Bernd Warken ⟨groff−bernd.warken−72@web.de⟩.
