## NAME
X11::Protocol::Ext::XFree86_Misc.pm – Perl module for the XFree86 Misc Extension

## SYNOPSIS
```
use X11::Protocol;
$x = X11::Protocol->new();
$x->init_extension('XFree86-Misc');
```

## DESCRIPTION
This module is used to access miscellaneous features of XFree86 servers

## SYMBOLIC CONSTANTS
This extension adds the MouseTypes, KeyboardTypes and MouseFlags constants, with values as defined in the XFree86 3.3.3 source code.

## REQUESTS
This extension adds several requests, called as shown below:

```
$x->XF86MiscQueryVersion => ($major, $minor)

$x->XF86MiscGetSaver($screen) => ($suspendtime, $offtime)

$x->XF86MiscSetSaver($screen, $suspendtime, $offtime)

$x->XF86MiscGetMouseSettings => (%settings)

$x->XF86MiscSetMouseSettings(%settings)

$x->XF86MiscGetKbdSettings => ($type, $rate, $delay, $servnumlock)

$x->XF86MiscSetKbdSettings($type, $rate, $delay, $servnumlock)
```
