**NAME**
    pcap-config − write libpcap compiler and linker flags to standard output

**SYNOPSIS**
    **pcap-config** [ −−**static** ] [ −−**cflags** | −−**libs** | −−**additional-libs** ]

**DESCRIPTION**
    When run with the −−**cflags** option, *pcap-config* writes to the standard output the −**I** compiler flags re-
    quired to include libpcap's header files. When run with the −−**libs** option, *pcap-config* writes to the stan-
    dard output the −**L** and −**l** linker flags required to link with libpcap, including −**l** flags for libraries required
    by libpcap. When run with the −−**additional-libs** option, *pcap-config* writes to the standard output the −**L**
    and −**l** flags for libraries required by libpcap, but not the −**lpcap** flag to link with libpcap itself.

    By default, it writes flags appropriate for compiling with a dynamically-linked version of libpcap; the
    −−**static** flag causes it to write flags appropriate for compiling with a statically-linked version of libpcap.
