NAME
  solaar – wireless Logitech device manager

SYNOPSIS
  solaar [*options*]

DESCRIPTION
  solaar is a device manager for Logitech wireless devices (keyboards and mice). It supports many recent Unifying devices, allows pairing and unpairing devices, querying the battery level, and configuring various features such as smooth scrolling, side scrolling...

OPTIONS
  solaar accepts the following options:

  −h, **−−help**
      Displays a brief help message and quits.

  −d, **−−debug**
      Starts the graphical device manager and prints logging messages during execution.

  −V, **−−version**
      Displays the program's version number and quits.

  Without options, starts the graphical device manager if it is not already running, or displays the configuration screen if it is.

AUTHORS
  solaar was written by Daniel Pavel.

  This manual page was written by Stephen Kitt <skitt@debian.org>, for the Debian GNU/Linux system (but may be used by others). It was last modified for **solaar** version 0.9.2.
