NAME
     flatpak-search – Search for applications and runtimes

SYNOPSIS
     flatpak search TEXT

DESCRIPTION
     Searches for applications and runtimes matching TEXT. Note that this uses appstream data that can be
     updated with the **flatpak update** command. The appstream data is updated automatically only if it's at least
     a day old.

OPTIONS
     The following options are understood:

     −−user
          Only search through remotes in the per−user installation.

     −−system
          Only search through remotes in the default system−wide installation.

     −−installation=NAME
          Show a system−wide installation by NAME among those defined in /etc/flatpak/installations.d/. Using
          −−installation=default is equivalent to using **−−system**.

     −h, **−−help**
          Show help options and exit.

     −v, **−−verbose**
          Print debug information during command processing.

     −−ostree−verbose
          Print OSTree debug information during command processing.

     −−columns=FIELD,...
          Specify what information to show about each result. You can list multiple fields, or use this option
          multiple times.

          Append :s[tart], :m[iddle], :e[nd] or :f[ull] to column names to change ellipsization.

FIELDS
     The following fields are understood by the **−−columns** option:

     name
          Show the name

     description
          Show the description

     application
          Show the application ID

     version
          Show the version

     branch
          Show the branch

     remotes
          Show the remotes

     all
          Show all columns

     help
          Show the list of available columns

Note that field names can be abbreviated to a unique prefix.
