NAME
      ncursesw6-config – helper script for ncurses libraries

SYNOPSIS
      ncursesw6-config [*options*]

DESCRIPTION
      This is a shell script which simplifies configuring applications against a particular set of ncurses libraries.

OPTIONS
      −−prefix
            echos the package−prefix of ncurses

      −−exec−prefix
            echos the executable−prefix of ncurses

      −−cflags
            echos the C compiler flags needed to compile with ncurses

      −−libs   echos the libraries needed to link with ncurses

      −−version
            echos the release+patchdate version of ncurses

      −−abi−version
            echos the ABI version of ncurses

      −−mouse−version
            echos the mouse−interface version of ncurses

      −−bindir
            echos the directory containing ncurses programs

      −−datadir
            echos the directory containing ncurses data

      −−includedir
            echos the directory containing ncurses header files

      −−libdir
            echos the directory containing ncurses libraries

      −−mandir
            echos the directory containing ncurses manpages

      −−terminfo
            echos the $TERMINFO terminfo database path, e.g.,
            /etc/terminfo

      −−terminfo−dirs
            echos the $TERMINFO_DIRS directory list, e.g.,
            /etc/terminfo:/lib/terminfo:/usr/share/terminfo

      −−termpath
            echos the $TERMPATH termcap list, if support for termcap is configured.

      −−help   prints this message
